

Litecoin Finance White Paper

Litecoin Finance is a result of Litecoin forking, to create more stable blockchain protection by changing the algorithm from scrypt to Yescrypt32 - modified yescrypt <https://github.com/defuse/yescrypt/blob/master/new-spec/yescrypt.txt> . Various alternative currencies have come and gone. Some brought innovation, but they all had problems.

Litecoin Finance is a peer-to-peer Internet currency that enables instant, near-zero cost payments to anyone in the world. Litecoin Finance is an open source, global payment network that is fully decentralized without any central authorities. Mathematics secures the network and empowers individuals to control their own finances. Litecoin Finance features faster transaction confirmation times and improved storage efficiency than the leading math based currency - Litecoin.

Blockchain

The Litecoin Finance blockchain is capable of handling higher transaction volume than its counterpart - Litecoin. Due to more higher block maximum size: 8 mb the network supports more transactions without a need to modify the software in the future.

As a result, merchants get faster confirmation times.

Wallet Encryption

Wallet encryption allows you to secure your wallet, so that you can view transactions and your account balance, but are required to enter your password before spending Litecoin Finance coins. This provides protection from wallet-stealing viruses and trojans as well as a sanity check before sending payments.

Open Source Software

Litecoin Finance is an open source software project released under the MIT/X11 license which gives you the power to run, modify, and copy the software and to distribute, at your option, modified copies of the software. The software is released in a transparent process that allows for independent verification of binaries and their corresponding source code.

Litecoin Finance White Paper

What is different between Litecoin and Litecoin Finnacle

Litecoin Finnacle		Litecoin
1550000	Start fork block	none
LTFN	Ticker	LTC
YescryptR32	Pow Algorithm	Scrypt
39328	P2P Port	9333
39327	RPC Port	9332
C	Address letter prefix	L
N	Multisig Address prefix	M
ltn	Bech32 Address prefix	ltn
2.5m	Block time	2.5m
POW	Proof of Work	POW
840,000 blocks	Reward halves	840,000 blocks
50 coins	Reward	50 coins
Yes	2-way replay protection	no need
100 + 1 blocks	Maturity	100 + 1 blocks
8 mb	Block maximum size	4 mb
Every block	Difficulty Re-target	2016 blocks
DarkGravityWave 3	Difficulty Re-target algo	Standart BTC
94m	Maximum coin supply	82m
a7b388e9	Network magic	fbc0b6db
10m	Postmine	Unknown
Yes	Segwit	Yes

Litecoin Finance White Paper

Source code

The source code is here:

<https://github.com/litecoinfinance/litecoinfinance>

This is based on the latest Bitcoin code. You can either build the daemon version (litecoinfinanced) or you can build the gui version (Litecoin Fianance QT). See the build docs.

Similar to Bitcoin, you may want to create a litecoinfinance.conf file here:

Windows: C:\Documents and Settings\<username>\Application Data\Litecoinfinance

Win7: C:\Users\<username>\AppData\Roaming\Litecoinfinance

Mac: ~/Library/Application Support/Litecoinfinance

Unix: ~/.litecoinfinance

Port is 39328. Open if on your router if you know how. This will allow you to have more than 8 connections.

And default RPC port is 39327. This is the port miners will use to communicate with your client/daemon.

Sample litecoinfinance.conf file:

Code:

```
rpcuser=User  
rpcpassword=Password  
server=1  
listen=1  
daemon=1  
txindex=1  
rpccallowip=127.0.0.1  
rpcport=9332  
rpcthreads=128  
rpcworkqueue=1024  
maxconnections=12  
rpccallowip=127.0.0.1
```
